

## Invisible Image Generator Software for Inkjets

*Works with any software application with print feature to instantly create invisible color print output on documents, packaging, pictures and graphics!*

- Authenticate and protect documents, checks, currency, packaging and products from counterfeiting and fraud.
- Impress and inspire with vividly self-illuminating color images which appear spontaneously once excited with UV/black light.
- Use with any Stealth-enabled printer\* using x-nano™ I-Series Invisible White, Red, Green and Blue inks.

Original and secure check with MICR and invisible fluorescent graphics and barcode.

ID with invisible fluorescent color picture.

Secure event ticket with invisible fluorescent barcode and text.

\*Stealth-enabled can be any inkjet or all-in-one printer which has the ability to replace conventional ink (Black, Cyan, Magenta, Yellow) with x-nano™ invisible ink (White, Red, Blue, Green).

*Invisible image without UV light.*

*Self-illuminating invisible full-color image when excited with UV light.*

*Original visible full color image.*

## Invisible Image Generator Software for Inkjets

### Overview

TransChrome™ software installs a custom print driver that integrates with your printer and allows you to convert any visible color image you create with your camera or standard software application, into invisible UV fluorescent inkjet output. Simply send your print job to your Stealth™-enabled\* all-in-one printer or invisible ink-enhanced standard inkjet printer\* and let TransChrome™ intercept and manage your document by printing an invisible replica of your original visible color image.

### Provide Unprecedented Security Options

TransChrome™ allows you to convert pictures or add custom artwork, logos, security marks, signatures, patterns and encrypted codes as invisible output to uniquely brand products from falsification and counterfeiting and help you authenticate documents. You can also add invisible full-color security to existing packaging, documents, products and more by using the copy/scan functions of your Stealth-enabled\* all-in-one inkjet along with TransChrome™, such as watermarks to letterhead, serial codes or background images.

### Create Stunning Visual Effects

x-nano™ invisible I-Series UV fluorescent inks in White, Red, Green and Blue will replace your standard CMYK inks, giving you flexibility to enhance documents, walls, windows, signs, clothing, tissue and other surfaces with the unexpected appearance of brightly colored images that will only appear when excited by UV light.

### Includes:

TransChrome™ invisible color image generator software for inkjet printers.

### Systems Requirements:

- Windows® 10, 8, 7, Vista, XP – 100 MB hard disk space Stealth™-enabled inkjet printer\* or all-in-one\* with Windows® driver
- x-nano™ I-Series UV fluorescent White, Red, Green, Blue inks
- UV dull paper or non-paper surfaces

TransChrome™ software, Stealth-enabled\* inkjet devices and supplies available at [versacheck.com](http://versacheck.com) and authorized resellers.
